**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2,6,17,18 are rejected under 35 U.S.C. 102(b) as being anticipated by Memon. This patent discloses a process for forming rubber crumb including the steps of cooling, pulverizing, and separating.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-15, ~~19~~, 24, 25, 27-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Memon. The limitations of these claims would have been obvious design choices only once the basic process was known. For example, drying the material whenever desired would clearly be within the scope of one skilled in the art to produce the desired product.

Claims 3-5, 7, 10, 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Memon as applied to claim 1 above, and further in view of Azar. Memon does not show the removal of metallic materials. Azar shows in a similar process the removal of

metallic materials to produce the desired product. In order to produce the desired product, it would have been obvious for one of ordinary skill in the art to modify Memon by using metallic separating means, taught to be desirable by Azar. Note that the particular time of separation within the process would have been an obvious modification by one skilled in the art to ensure the removal of the metallic material.

Claims 20-23,26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Memon in view of Azar as applied to claim 19 above, and further in view of Lovette. The basic combination does not show the recycling of oversized material for further crushing to produce the desired product. Lovette solves this problem by showing a similar process including such a recycling step. In order to properly crush all of the material, it would have been obvious for one of ordinary skill in the art to modify Memon by providing a recycling step, taught to be desirable by Lovette.

Claims 8,9,16,35-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Memon as applied to claim 1 above, and further in view of Lovette. See the previous paragraph for the use of Lovette. Note also that Lovette shows the use of a hammermill and a 3 deck screen and incorporating these steps into Memon would have been obvious to one skilled in the art in order to produce the final desired product.
